What The DOTMLPF Analysis Told Us

SAMPLE GAPS

- Training and evaluation for sustained operations within a CBRN/TIM hazard is inadequate.
- Exercises and training do not emphasize task performance and operations in a CBRN/TIM environment.
- Joint exercises/experiments are limited in number and scope. Feedback from these CBRND exercises/experiments is limited to the data has been captured.
- There are few exercises that specifically address CBRND operations or the full spectrum of CBRN/TIM conditions.
- Current doctrine, the UJTL, and operational planning do not adequately address sustained operations within a CBRN/TIM environment.
